

ANGLO AMERICAN PLC

Investment overview

Copper-led critical minerals platform, supported by premium iron ore cash flows and long-dated Woodsmith optionality.

September 2026

DCF implied share price

\$38.66

2025A underlying EBITDA

\$6.4bn

2030E EBITDA margin

46.0%

Copper + iron ore share

~93%

Investment Thesis

A simplified portfolio anchored by scarce, long-life copper exposure

Anglo American offers institutional investors a rare combination of Tier 1 copper exposure, premium iron ore cash generation and actionable portfolio transformation.

Investment pillar	Why it matters
Copper core	Long-life assets with management-backed production growth through 2028
Premium iron ore	High-quality Kumba / Minas-Rio products support cash conversion and resilience
Portfolio simplification	De Beers / legacy exits remove drag and sharpen capital allocation
Teck merger option	>70% copper exposure and \$800m recurring pre-tax synergies targeted

ASSET HIERARCHY

1 Collahuasi scale / reserve life	2 Quellaveco low-cost modern asset	3 Los Bronces resource depth	4 Minas-Rio premium iron ore	5 Kumba quality / mix uplift	6 Woodsmith long-term optionality
--	---	---	---	---	--

Core investor message: own scarce copper growth without losing the cash-flow ballast of premium iron ore.

Copper Is the Crown Jewel

Collahuasi, Quellaveco and Los Bronces provide the core re-rating argument

Asset	Ownership	Reserve life	Investor angle
Collahuasi	44.0%	~63 yrs	Scale, grade and QB adjacency upside
Quellaveco	60.0%	~30 yrs	Low-cost, modern Peru platform
Los Bronces	50.1%	~36 yrs	Large Chilean resource + Andina optionality

MANAGEMENT PRODUCTION PATHWAY				
Copper production	2025A	2026E	2027E	2028E
Midpoint / actual	695kt	730kt	780kt	820kt
Growth vs. prior	-	+5%	+7%	+5%

Why investors should care

- Copper revenue can grow even without major greenfield spend because near-term volume uplift is management-backed.
- Scarce long-life copper assets are increasingly difficult to replicate as permitting, capex intensity and social licence constraints rise.
- Potential Teck combination creates additional Collahuasi / QB adjacency value beyond the standalone forecast.

BASE CASE FORECAST TRANSLATION				
Copper revenue	2025A	2030E	Base case assumption	Rationale
\$m	8,122	12,086	2026 +26%	Higher pricing + modest volume growth
CAGR	-	~8.3%	2027-30 +3.5-5%	Normalised but structurally supportive market

Copper is the primary valuation lever: the portfolio is increasingly exposed to a commodity with strong structural demand and constrained new supply.

Cash Flow Resilience & Valuation

Premium iron ore stabilises the equity story; Woodsmith adds long-dated upside

Asset / business	Role in the pitch	Key message
Kumba	Cash-flow anchor	Premium-grade South African iron ore with mix uplift from UHDS
Minas-Rio	Long-life platform	High-grade Brazilian iron ore with Serpentina option value
Woodsmith	Strategic option	World-scale polyhalite optionality; avoid over-crediting near-term revenue
Manganese / Other	Portfolio support	Small, not thesis-defining; keep assumptions conservative

How the CIM should sell the numbers

- Margin expansion is the headline: De Beers drag removed, cost savings delivered, and copper mix rises.
- Capex profile de-risks cash conversion: management guidance steps down from ~\$3.1bn in 2026 to ~\$2.6bn in 2028.
- Valuation upside should be framed as a base case from the standalone DCF, with Teck / Woodsmith optionality treated separately.

BASE CASE DCF OUTPUTS

Metric	Value	Metric	2025A	2030E
Enterprise value	\$52.8bn	Revenue	\$18.5bn	\$20.7bn
Equity value	\$43.7bn	Underlying EBITDA	\$6.4bn	\$9.5bn
Implied value / share	\$38.66	UFCF	\$2.0bn	\$4.4bn
WACC / terminal growth	9.4% / 2.0%			

CONCLUSION

A simplified Anglo American can be positioned as a scarce copper-led asset platform with premium iron ore cash flow support, visible near-term margin improvement and credible long-term optionality.

Most compelling use case: equity / strategic investor pitch focused on asset scarcity, FCF growth and capital allocation discipline.
