OPERATIONAL RESTRUCTURING ROADMAP

Managements strategic roadmap focuses on three urgent priorities to defend cash flows and stabilise long-term returns

PORTFOLIO CLEANUP

Streamlining the Front-End Portfolio

- 50% model reduction
- Lower Current Payables

CAPACITY CONSOLIDATION

Streamlining the Back-End Operations

- Factory capacity cuts
- Headcount downsizing

TECHNICAL STANDARDISATION

Unified Cell

- One Standardised Cell Architecture
- Amortises Group R&D/CapEX

ENGINE DIAGNOSTIC: CURRENT DRAG vs. 2030 CALIBRATION

The Current Diagnostic

Headcount Burden

High legacy labour costs in European plants create a rigid operating expense base that limits flexibility and margins

Component Complexity

Many battery suppliers and cell variations fragment purchasing power and inflate R&D costs and time-to-market

Portfolio Clutter

Too many niche, low-margin ICE models consume capital and supplier payables without delivering health cash flows

The 2030 Calibration

Three strategic pillars phased in over time to unblock measurable financial impact.

THE THREE-LANE HIGHWAY PERSPECTIVE

2030 TARGET:
STABILISED EMPIRE

LANE 1: ASSET BACKING

€22.5B market cap is
de-risk by luxury
Porsche/Audi assets.

LANE 2: FREE CASH FLOW

€11B admin target locks
in cash flows.

LANE 3: ASYMMETRIC UPSIDE

3.57% WACC creates
massive discounted
upside today.
